

Fire Safety Services

Fires are every business owners' worst nightmare. They damage property, injure employees, put people out of business and take lives. If the worst should happen right now, how confident are you that your fire devices would perform?

To comply with the law, steer clear of costly fines and keep you, your business and your employees safe, you're legally required to regularly service your fire devices and have an up-to-date fire risk assessment in place - and that's where we come in.

How we can help

Fire Risk Assessments

An experienced assessor will visit your site(s) and: identify any hazards, explain their level of risk, and produce a bespoke action plan with recommendations and identify your overall risk rating.

Fire Alarm Servicing

An FIA registered professional will check your fire alarm to ensure it operates as expected when required to do so, and ensure your alarm is serviced and maintained to meet legal requirements.

Fire Extinguisher Servicing

Legally, a competent and appropriately trained individual must service your fire extinguishers and blankets once a year, and you must house a certificate proving the satisfactory state of your equipment on-site. We'll help you with all of this, and check you have the right equipment in place.

Emergency Lighting Testing

Emergency lights are critical for the safe evacuation of everyone on-site in the event of a power failure. Our expert engineers can: deliver ongoing, annual inspections; supply a service certificate and report; and ensure there's an inspection entry in your fire logbook for compliance purposes.

All our engineers are experienced and highly qualified:

Why choose us?

- Every single one of our engineers are fully qualified and accredited, to conform with the latest regulations.
- Our pricing is transparent. For your ease, it's based on the size of your business, not the number of devices.
- After every service or test, we'll always provide you with relevant reports and certificates for your action and compliance.
- All our work is 100% warranted, and we're fully insured with public liability across all our engineers.
